Website / Celestial

September 2021 - October 2021

So this is a personal project of mine, essentially I am building it to preserve a very special book's content and also learn NuxtJs. It is about spreading positive messages for people and encouraging them to take a moment of reflection during their day. It is my most recent work and I am really happy with the result so far.

Technologies used:
Vue.js, CSS

Content Manager / Publicity

December 2019 - October 2021

I have been developing the front end of this project for almost 2 years now. It has been a great challenge for me, as I built it from scratch: my mission was to develop the web version of a desktop content management software (I wasn't allowed to see the old version, I just had to get to know its features).

The whole process of seeing it grow out of the sketches and get bigger every week was awesome. Today we have a large, complete and stable system that went beyond our customer's expectations, and I am really proud to be part of this team (composed by one manager, one back end developer and me as front end developer).

Technologies used:
Vue.js, Javascript, HTML, CSS
