

# Curriculum vitae

## Personal data

---

**Name:** Lucian B.

### Technical Knowledge and Skills

Angular, Javascript, HTML, CSS

Managing to become an experienced full stack developer, during my career I have been accumulating a lot of experience, being involved in many projects and many types of environments. As a software engineer I consider myself a very organized and strict guy when it comes up to code quality. I like to teach, I like to do classes with others and to share every experience I've been lucky to learn from. Other than programming, my second passion is to compose electronic music, of course, on a computer.

## Education

---

September 2013 –  
July 2016
